

ReignVault

Alpha Tester Guide

Part of the Amethyst Reign app portfolio

Note: The app interface may still display "SafeSpot" — that's the original name. ReignVault is the new brand. Same app, same link.

What It Does

ReignVault is a photo-based memory tool. Take a photo of anything you put somewhere intentionally — AI describes the item and its location in detail. Later, search in plain language to find it. Works offline after the initial save.

App link (open in Safari on iPhone):

plumvault.netlify.app

Quick Setup (~15 min)

1. Create Anthropic account

console.anthropic.com

2. Add a credit card

Pay-as-you-go, not a subscription. Typical cost: ~\$1-2 per year total. No recurring charges.

3. Get your API key

Starts with *sk-ant-* — send it to your phone via Notes, text, or email.

4. Open in Safari on your iPhone

plumvault.netlify.app

5. Paste API key and tap Save

6. Add to Home Screen

Tap the Share button (box with arrow at bottom of Safari) then Add to Home Screen.

7. Optional: Lock Screen shortcut

Via the Shortcuts app — opens ReignVault from your lock screen in one tap.

How It Works

- **Save:** Take photo, give it a name, tap save. AI adds a detailed description automatically.
 - **Find:** Search anytime in plain language. Works offline once items are saved.
 - **Update:** Moved something? Tap Moved It, snap a new photo, and the record updates.
-

Backup (Recommended Monthly)

Your items are stored on your device only. Export regularly so you never lose them if you clear Safari or get a new phone. Export and Restore buttons are in the app settings.

Limitations (Alpha)

- Internet needed when saving a new item (for AI description generation)
 - API key is per device — each new device needs its own key
 - Alpha stage — features are being added based on feedback
-

Feedback and Support

Questions, bugs, or ideas are always welcome. This is an early-stage tool and feedback genuinely shapes what gets built next.
